Re: Public Notification
More's Lake – Construction and Liner Details

In accordance with 40 CFR 257.100, the following is a statement regarding the construction and documentation of a liner at More's Lake, located at the City of Columbia, Water & Light Department's Municipal Power Plant, 1501 Business Loop 70 E, Columbia, Missouri.

More's Lake was previously used for the handling of Coal Combustion Residuals (CCRs) and is currently in "inactive" status. A clean closure project is currently underway.

More's Lake was constructed no later than July 1896 on property owned by EC More. Columbia Water & Light (CWL) purchased the property and constructed the Municipal Power Plant about 1914.

CWL does not have any documentation related to the original construction of More's Lake.

More's Lake does not have a liner, as set forth by 40 CFR 257.71(a) and (b). Therefore, More's Lake is considered "unlined."

This notification satisfies 40 CFR §257.100 (e)(3)(i) required notices under which the City must complete documentation of the liner type as set forth by 40 CFR 257.71 (a) and (b).

For additional information, please contact Christian Johanningmeier, City of Columbia Water & Light Power Production Superintendent at 573-874-6236.

Christian Johanningmeier, PE
Power Production Superintendent
